

10 good reasons to acquire a MEDCO fridge

1. Compliance: Under the new South African Healthcare Regulation MEDCO were the first SAHPRA licensed vaccine cold chain brand. Our manufacturing partners have a proud 60-year history in South Africa and are ISO9001:2015 accredited. They are also the ONLY World Health Organization approved vaccine fridge manufacturer in Africa.
2. UV treatment: On completion of our manufacturing process our entire fridge undergoes Germicidal Ultraviolet treatment. The process deactivates the DNA of bacteria, viruses and other pathogens and thus destroys their ability to multiply and cause disease.
3. Digital Control Module: Allows for control of the temperature of the cabinet as well as displaying the product temperature. Supported by our unique air-stratification technology it ensures a stable mean kinetic temperature is maintained throughout the fridge. It also controls the energy usage of the cabinet and protects the unit against poor power supply.
4. Double pane safety Low E glass: Both the internal and external panes of glass on MEDCO fridges are double tempered in line with international standards and ensuring that safety not compromised in the event of a breakage. The Low E glass reduces heat loss by almost 30% compared to ordinary double planed glass. It increases the efficiency of the cabinet as well as minimizing condensation.
5. Ventilation: Only front ventilation required. Intelligent design of the condensing unit allows for the unit to be placed flush against a wall with no side or back ventilation required. Simple removal of the front ventilation grill allows for easy access to all the main components without having to move the cabinet from its location.
6. Castors: All our large double door fridges come standard with 4 (2 lockable) heavy duty castors for easy maneuverability.
7. Hi-quality components: MEDCO units are manufactured using the best quality components that have been tried and tested in the medical industry. The use of the best heat exchangers in the condenser and evaporator ensures the performance and efficiency of the unit. Extensive anti-corrosive materials are used throughout.
8. Self-closing doors: Be it the simple gravity system on our sliding doors or the durable torsion bar system on our hinge door models, reliability is assured.
9. Eco Mate foam: Water based insulation foam that is non-flammable and has Zero ODP (ozone depletion potential)
10. Service: National service network with a 48-hour turnaround promise.

MEDCO – affordable reliability
