

GROUP B STREPTOCOCCUS

Promote healthy outcomes for babies worldwide

An infection caused by a common bacterium (group B streptococcus).

Group B strep disease is a common cause of severe infection in newborns. About 1 in 4 pregnant women "carry" or are "colonized" with group B strep.

Up to 40% of pregnant women carry Group B Strep (GBS), the leading infectious cause of sepsis and meningitis in newborns in the first week of life.

Revogene - GBS DS

Provides physicians with rapid, accurate and reliable results, allowing for appropriate treatment decisions of mother at time of delivery, ensuring the best outcome for baby.
