**FRENCH  
NEUROTROPIC (FNT)**

**Yellow Fever Virus** (Strain: French Neurotropic (FNT)) is an enveloped, icosahedral Flavivirus and contains a nonsegmented, single-stranded positive-sense RNA.

Each frozen aliquot contains 1 mL of heat inactivated viral culture fluid.

The pre-inactivation titer was determined from an infectious aliquot. Viral inactivation is verified after heat inactivation by the absence of viral growth in tissue culture-based infectivity assays.

Heat inactivated viral culture fluids are sold as consumable testing materials. The suitability and performance characteristics should be determined by your laboratory for each intended usage.
